Getting System Information Customization

The Hard Way

- lspci
- uname -a
- cat *</etc/issue>*
- *cat /proc/cpuinfo*

The Easy Way

- Use neofetch
- sudo apt-get install neofetch
- (alt: sudo apt install neofetch)

Bonus

Make neofetch appear whenever terminal is opened:

- Nautilus -> Home directory

- ctrl-h to show hidden files

- edit .bashrc: nano .bashrc -> scroll to end -> add "neofetch" (without the quotes)

Another Bonus

- Make terminal transparent
  - Preferences -> Profile -> Colors

Customizing GNOME

- Install GNOME Tweaks
- Install GNOME shell extensions
  - In Web browser: extensions.gnome.org
  - Click to allow integration into Firefox
  - My favorites: Magic Lamp, ArcMenu
