# Ubuntu-Maryland Jan 23, 2021 Meeting

Our first virtual meeting of the year was well attended.

After introductions, Ron Swift gave a brief overview of Peppermint OS, https://peppermintos.com.
This distro is built on Ubuntu LTS releases and it is designed to work on older machines.
It has a 32 bit and 64 bit version. Ron mentioned that he recently used it on a restoration project with old Dell computers that were donated to his church client. It is lightweight which makes it runs very smoothly with 1 GB to 2 GB memory but it really excels when you have 3+ GB of memory.

Our next discussion focused on topics that attendees wanted to have presented over the year and these included:
1. Wordpress
2. RetroPi
3. Firewalls
4. Apt Package management
5. Swift Programming Language
6. Networking and VPN's
